# World renowned and market leading...

buttonfuse® technology since 1994

## buttonfuse® solo

Up to  
**1,950**  
buttons  
PER HOUR\*

In order to **achieve a consistently high standard of button shank wrapping** it is essential that the shank length (X) is of sufficient length. Failure to achieve this will reduce the yield per cone and render the wrapping less effective in securing the button. **This is a simple setting on most button attaching machines.**

**As pioneers in innovative fusing technology, our unique range of button wrapping machines offer the biggest, fastest output currently available on the market.**

**Our products are so easy to use, provide consistent quality & all with minimal thread waste.**

With over 30 years of experience, our machines are made in the UK & built to last. Plus our global accredited support network means that our impeccable servicing is maintained at all times.

*\* Dependent upon wrap number & handling. This data is collected using MMS buttonfuse® TF thread & with the buttonfuse® solo machine set to it's minimum thread waste setting for the particular button type.*

GARMENT TYPE	SHANK LENGTH 'X' (before wrapping)	NUMBER OF WRAPS	APPROX. NUMBER OF BUTTONS PER CONE (using buttonfuse® solo)
Shirts	2.5mm	7	<b>11,100</b>
Jackets/Pants	3mm	12	<b>6,750</b>
Coats	4mm	26	<b>5000</b>

**Our thread is proven & specified by the major brands of the world & is the ideal partner to the buttonfuse® range of machines. The high quality components guarantee button security from shirts to raincoats.**

## buttonfuse® TF thread

We have the world's largest range of threads + our high stockholding levels mean that they are readily available exactly when you need them most. Request our shade card or download from our website for full details.
